

## Xiang Li

**Date Prepared:** September 20th, 2020  
**Name:** Xiang Li  
**Office Address:** 25 New Chardon St. 449A, Boston, MA, 02114  
**Home Address:** 5 Cabot Rd. Unit-318, Boston, MA, 02155  
**Work Phone:** (706)-248-0264  
**Work Email:** xli60@mgh.harvard.edu  
**Place of Birth:** China

### Education:

09/02-09/06	B.E.	Automation	Shanghai Jiaotong University
09/09-06/16	PhD	Computer Science, Distinguished Prof. Tianming Liu	University of Georgia

Working as Research Assistant at Nankai University, China from 09/06 to 09/09.

### Postdoctoral Training:

09/16-07/19	Research Fellow	Medical Image Analysis, Assoc. Prof. Quanzheng Li and Distinguished Prof. James H. Thrall	Harvard Medical School and Massachusetts General Hospital
-------------	-----------------	---	---

### Faculty Academic Appointments:

08/19-	Instructor	Radiology	Harvard Medical School
--------	------------	-----------	------------------------

### Appointments at Hospitals/Affiliated Institutions:

08/19-	Instructor	Radiology	Massachusetts General Hospital
--------	------------	-----------	--------------------------------

### Committee Service:

#### International:

2019	Program Chair	MICCAI Workshop on Multiscale Multimodal Medical Imaging (MMMI)
2019	Program Committee	Machine Learning in Computational Biology
2019	Program Committee	NeurIPS Workshop on Machine Learning in Computational Biology
2019	Program Committee	ACM SIGKDD Workshop on Mining and Learning from Time Series (MILETS)
2017	Program Committee	International Conference on Brain Informatics
2015	Program Committee	MICCAI Workshop on Machine Learning in Medical Imaging (MLMI)

### Professional Societies:

*Updated March 2019*

2017-	American Roentgen Ray Society (ARRS)	Member
2011-	Institute of Electrical and Electronics Engineers (IEEE)	Member
2011-	Engineering in Medicine and Biology Society (EMBS)	Member
2011-	The Medical Image Computing and Computer Assisted Intervention Society (MICCAI)	Member

#### **Editorial Activities:**

2019	Editor	Proceeding of First International Workshop, MMMI 2019
------	--------	---

#### **Ad hoc Reviewer**

International Conference on Machine Learning (2020)
Artificial Intelligence in Medicine
BMC Bioinformatics
Computer Methods and Programs in Biomedicine
Computer Methods in Biomechanics and Biomedical Engineering
Frontiers in Computational Neuroscience
Frontiers in Genetics
Frontiers in Human Neuroscience
Frontiers in Neuroscience
Frontiers in Oncology
Frontiers in Psychiatry
Human Molecular Genetics
JAMA Network Open
Journal of Electronic Imaging
IEEE/ACM Transactions on Computational Biology and Bioinformatics
IEEE Access
IEEE Journal of Biomedical and Health Informatics
IEEE Open Journal of the Computer Society
IEEE Transactions on Affective Computing
IEEE Transactions on Biomedical Engineering
IEEE Transactions on Cognitive and Developmental Systems
IEEE Transactions on Fuzzy Systems
IEEE Transactions on Medical Imaging
IEEE Sensors Journal
Mathematical Biosciences and Engineering
Medical Image Analysis
Neurocomputing
Neuroimage
Pattern Recognition
Physical Communication
Progress in Neurobiology

#### **Other Editorial Roles**

2019-	Editorial Board	Current Medical Imaging
2018-	Editorial Board	Journal of Healthcare Engineering

#### **Honors and Prizes:**

2020	Best Paper Awards	IEEE International Symposium on Biomedical Imaging	Conference
2016	Outstanding Graduate Dissertation/Thesis	University of Georgia	Thesis

#### **Report of Regional, National and International Invited Teaching and Presentations**

## **National**

- 2018 Deep Learning Algorithm for rapid automatic detection of pneumothorax on chest CT (selected oral abstract)  
Annual Meeting of American Roentgen Ray Society, Washington, D.C.

## **International**

- 2019 Holistic Brain Representation for Discovery Science in Neuroimaging (invited talk)  
Workshop on Computational Medical Imaging and Artificial Intelligence, Hangzhou, China
- 2019 Automated Segmentation of Cervical Nuclei in Pap Smear Images using Deformable Multi-path Ensemble Model (selected oral full-length paper)  
IEEE International Symposium on Biomedical Imaging, Venice, Italy
- 2016 Big Data Strategies on Neuroimaging Analysis: Challenge in Data Availability and Computation (invited talk)  
International Conference on Brain Informatics and Health, Omaha, NE
- 2014 Dynamic network partition via Bayesian connectivity bi-partition change point model (selected oral full-length paper)  
IEEE International Symposium on Biomedical Imaging, Beijing, China
- 2013 Discovering common functional connectomics signatures (selected oral full-length paper)  
IEEE International Symposium on Biomedical Imaging, San Francisco, CA
- 2011 Brain state change detection via fiber-centered functional connectivity analysis (selected oral full-length paper)  
IEEE International Symposium on Biomedical Imaging, Chicago, IL

## **Report of Technological and Other Scientific Innovations**

Automatic pre-screening method for pneumothorax detection	At MGH, I developed a software system for the automatic detection of pneumothorax from CT images. The system has been validated internally by multiple radiologists. The innovation is filed as Invention Disclosure to Partners HealthCare in 2017.
---	--

## **Report of Scholarship**

### **Peer-Reviewed Scholarship in print or other media:**

1. Zhang M\*, **Li X\*** Xu M, Li Q. Automated Semantic Segmentation of Red Blood Cells for Sickle Cell Disease. IEEE Journal of Biomedical and Health Informatics, 2020; in press.
2. Jeong S\*, **Li X\***, Yang J, Li Q, Tarokh V. Sparse Representation-Based Denoising for High-Resolution Brain Activation and Functional Connectivity Modeling: A Task fMRI Study. IEEE Access 2020; 8:36728-36740.
3. **Li X**, Thrall JH, Digumarthy SR, Kalra MK, Pandharipande PV, Zhang B, Nitiwarangkul C, Singh R, Khera RD, Li Q. Deep learning-enabled system for rapid pneumothorax screening on chest CT. European Journal of Radiology 2019;120:108692.

#### **PhD Thesis:**

"Machine Learning Approaches towards Holistic Brain Functional Space Discovery from fMRI Big Data"

#### **Narrative Report**

As an instructor at MGH/HMS, my research includes on two main fields which are interlinked: 1) development of new machine learning and artificial intelligence methodologies, mainly for the purpose of medical image analysis, and 2) applying these methods for solving practical clinical/scientific problems. With more than 10 years of experience in algorithm development/implementation and a doctoral degree in computer science, I have been working on new tools to support efficient large-scale data analytics, including matrix decomposition under different regularizations, new network architectures for deep learning models and distributed computing platforms. My work presented in 2016 ACM SIGKDD conference, "Scalable Fast Rank-1 Dictionary Learning for fMRI Big Data Analysis", is the first system that performs computation of terabytes-level neuroimaging data without relying on supercomputers. My current work on methodology development focuses on building a unified framework to integrate the analysis across multi-modal, multi-scale and multi-view images, as well as co-analysis of those images in a single model. This framework is particularly useful for medical image analysis, as usually there exists multiple scans of the same patient under different protocols (e.g. modalities, scanning parameters, etc.) and it is often desired for analyzing them together. From the application perspective, I have been working on the processing and analysis of medical images in two main categories: lung CT and brain MR. By collecting and analyzing CT images >300 patients within the institution, I have developed a deep learning-enabled system for pneumothorax detection (i.e. screening) with high sensitivity and very fast running speed. The system is among the four finalists of the 2018 NVIDIA Global Impact Award, for its potential impact on application of AI in healthcare. Currently I'm working on the alpha testing for the system's integration into the clinical workflow of MGH, as well as extending its applicability to other critical conditions such as pulmonary embolism. On the other hand, analysis of brain MR images especially functional MRI data is a continuation of my PhD research. Being among the first researchers who utilized mathematic models to characterize brain functional dynamics in both normal and abnormal populations (since 2011), my works on diagnosis of post-traumatic stress disorder (PTSD), attention deficit hyperactivity disorder

(ADHD), and mild cognitive impairment (MCI) are the pioneers in this field and inspired many later works. My current project on functional brain modeling involves using dynamic graph representation combined with geometric deep learning to achieve holistic and efficient characterization of functional brain states.
